ICM-30 and 36 GAME IN-COUNTER DISPENSER INSTALLATION

TAKE-A-TICKET, INC. RECOMMENDS YOU HAVE A PROFESSIONAL CONTRACTOR INSTALL THIS UNIT. HERE ARE SUGGESTIONS IF YOU CHOSE TO DO IT YOURSELF.

Note: You may want to remove the loose top glass that is taped in before you start or leave it taped in and work carefully.

#4 STEPS FOR INSTALLATION:

1. Make sure you have clearance under the counter before you cut the hole!

- The hole is at least 18-3/4" x 27-3/4" and the depth of the unit below the counter top is about 17" (#30 game unit) or 20" (#36 game unit).
- The hole should be set in at least 3" from the clerk's side of the counter so the clerks won't bump into anything extending from under the counter.
- **MAKE SURE YOU HAVE CLEARANCE!!!**
- Once you are sure of clearance and the hole's location check it again, and again!

2. Separate the upper and lower portions of the dispenser. Do not lose the carriage bolts, washers and wingnuts. Remove the trays from the unit and set aside.

3. Cut the hole. Wait! Are you sure about the location?

- The hole size is 18-3/4 x 27-3/4"
- Apply a bead of caulking around the hole on the counter surface.
- Drop the upper portion of the dispenser with the metal frame and glass into hole. The open side with no white plastic faces the clerk's side.

4. Reattach the bases of the dispenser to the upper part using bolts, washers, and nuts. There is some adjustment possible up and down for the lower unit.

- Load the display trays and place them up under the glass. See the other side of this sheet for loading instructions. Use the numbered clips provided on the displayed tickets to make it easy for the customer to tell which ticket they want to buy.
- Load the trays with the ticket packs. Place the tickets under the plastic rods. **Do not run the tickets over the rods.** Place the trays in the dispenser and lock.

Note: The bottom piece of glass is sealed in place to prevent leaks under the counter.
