

# MTD (Motorized Ticket Display) IN-COUNTER Lottery Dispenser

## Display box with motor:

- The display unit shown will retro fit into existing ICM units already in stores
- 9 volt motor system is designed for continuous duty with a minimum moving parts
- Display panel control is factory set to rotate at either an 6 or 8 second interval
- The two sided columns display up to #15 of the 4" x 4" display tickets per side for a total of #30 games
- In the 24 game configuration there are 24 column inches available for the advertising
- The right hand column is 12" long could be used solely for advertising on both sides

The clerk side of the unit is the same as in earlier units

## Remote bases are available where:

- The space beneath the display unit is used for other purposes
- Multiple checkout lanes each have a display but share one base holding the ticket packs for all lanes

A one piece "drop-in base is available for all in counter models allowing quick and easy replacement of older in-counter units
